### Other comments

The work is processed relatively clearly. From the formal point of view, the work can be considered successful, the logical division into individual chapters corresponds to the procedure for solving the set problem, from the linguistic point of view, the work is successful, it is comprehensible and the usable style is appropriate. I criticize the author that in some cases the picture is scattered from the headlines and that it is difficult to find reports in the literature that the author uses as a basis for sector analysis.

In terms of the content of the work, the work can also be considered successful, it can be stated that the goal of the thesis was fulfilled. At work, I am missing examples of projects that already exist.

### Questions and suggestions for the defence

Which EU country uses blockchain the most?  
 Can you give similar examples in the Czech Republic?

## Overall evaluation

I **recommend** the thesis for defence.  
The proposed grade for the thesis: C
